

Procure-to-Pay (P2P) Project

Full Purchasing Cycle in SAP MM

Submitted by: Adrish Khan

Roll Number: 23051566

**Batch / Program: 2023–27 (SAP Functional
Consultant) Institution: KIIT**

1. Problem Statement

A medium-sized manufacturing company gets purchase requests from different departments. Right now, all the purchasing steps are done manually using spreadsheets and email, which causes problems like wasted time, repeated data, slow approval times, and weak vendor relationships. There's no single system in place to track purchase orders, check how well vendors are performing, or handle issues with invoices.

The goal of this project is to create and explain a full Procure-to-Pay (P2P) process in SAP MM (Materials Management).

This will make the whole purchasing process smoother, from when a request is made through to paying the vendor. It ensures better control, clear visibility, and real-time updates on all procurement activities.

The P2P process includes seven main steps: Purchase Requisition (PR), Request for Quotation (RFQ), Quotation Evaluation, Purchase Order (PO), Goods Receipt (GR), Invoice Verification (IV), and Vendor Payment.

Each step includes detailed instructions for setting up SAP MM, along with transaction codes and clear, step-by-step procedures.

2. Solution Overview: The Full P2P Cycle.

The Procure-to-Pay cycle is a seven-step purchasing process in SAP MM that gives full control and clear visibility over all procurement activities. Each step uses specific SAP transactions, master data setups, and business rules.

2.1 The Seven Stages of P2P

Stage	SAP Transaction	Purpose	Key Actors
1	PR (ME51N)	Purchase Requisition	Department / Requester
2	RFQ (ME41)	Request for Quotation	Procurement Team
3	Quotation (ME47)	Compare vendor quotes	Procurement Manager
4	PO (ME21N)	Create Purchase Order	Buyer / Procurement
5	GR (MIGO)	Goods Receipt	Warehouse / Stores
6	IV (MIRO)	Invoice Verification	Finance / AP Team
7	Payment (F-53)	Vendor Payment	Finance / Treasurer

3. Master Data Configuration

Before you can start creating any P2P transactions, you need to set up the master data in SAP. This involves configuring material masters, vendor masters, and the purchasing organisation structures.

3.1 Material Master Setup (Transaction MM01)

Field	Value	Description
Material Code	MAT-001	Steel Billets (Unique ID)
Material Description	Steel Billets - Grade A	Full description for identification
Material Type	ROH (Raw Material)	Indicates this is a purchased material
Unit of Measure	KG	Kilogram
Purchasing Group	PG01	Assigned for procurement
Plant	PL01	Kolkata Manufacturing Plant
Valuation Class	3000	Raw Material valuation class

3.2 Vendor Master Setup (Transaction FK01)

Field	Value	Description
Vendor Code	V-001	Tata Steel Suppliers Ltd. (Unique ID)
Vendor Name	Tata Steel Suppliers Ltd	Legal vendor name
Country	IN	India
City	Kolkata	Vendor location
Currency	INR	Indian Rupee
Payment Terms	Net 30 Days	Time to pay invoice
Purchasing Org	PO01	Assigned purchasing organisation

3.3 Purchasing Organisation Setup

SAP Object	Code	Description
Purchasing Organisation	PO01	Central Purchasing Department

Purchasing Group	PG01	Raw Materials & Components
Plant	PL01	Kolkata Manufacturing Plant

4. Detailed P2P Transaction Flows with SAP Screens

4.1 Stage 1: Purchase Requisition (ME51N)

A purchase requisition is an internal document that lets the procurement team know when materials are needed. It is made by department heads, project managers, or material planners when the stock of materials goes below the set reorder level.

Field	Value
Transaction Code	ME51N
Document Type	NB (Standard PR)
PR Number	PR-2026-001
Material	MAT-001 (Steel Billets)
Quantity	5,000 KG
Delivery Date	25-Apr-2026
Plant	PL01
Storage Location	SL01 (Raw Material Store)
Purchasing Group	PG01

4.2 Stage 2: Request for Quotation (ME41)

A request for quotation is sent to several vendors to get pricing and delivery information for the materials listed in the purchase request. This helps in getting the best price and choosing the most suitable vendor.

Field	Value
Transaction Code	ME41

RFQ Document Type	NB (Standard RFQ)
RFQ Number	RFQ-2026-001
Material	MAT-001
Quantity	5,000 KG
Vendors Contacted	V-001, V-002, V-003
Quotation Due Date	20-Apr-2026

4.3 Stage 3: Quotation Comparison & Evaluation

Vendor	Quoted Price/KG	Total Cost	Lead Time	Quality Rating	Selected
V-001 (Tata Steel)	INR 85.00	INR 4,25,000	7 days	A Grade	—
V-002 (Alloy Masters)	INR 82.50	INR 4,12,500	10 days	A Grade	✓ YES
V-003 (National Steel)	INR 88.00	INR 4,40,000	5 days	B Grade	—

Selection Criteria: Vendor V-002 (Alloy Masters) selected for lowest total cost (INR 4,12,500) with acceptable lead time and A-grade quality rating.

4.4 Stage 4: Purchase Order Creation (ME21N)

Once the best vendor is chosen, a Purchase Order is generated in SAP. This is a formal document sent to the vendor that confirms the order details, including the amount of goods or services, their cost, and the terms for delivery.

Field	Value
Transaction Code	ME21N
Document Type	NB (Standard PO)
PO Number	4500000001
Vendor	V-002 (Alloy Masters Pvt. Ltd.)

Material	MAT-001 (Steel Billets)
Quantity	5,000 KG
Net Price	INR 82.50 per KG
Total PO Value	INR 4,12,500
Plant	PL01 (Kolkata)
Expected Delivery Date	27-Apr-2026
Payment Terms	Net 45 Days
Delivery Address	Kolkata Manufacturing Plant, SL01

4.5 Stage 5: Goods Receipt (MIGO)

When materials come to the plant, the warehouse team enters a Goods Receipt in SAP through the MIGO transaction. This action updates the inventory and sets up a GR/IR (Goods Receipt/Invoice Receipt) clearing account entry in the financial module.

Field	Value
Transaction Code	MIGO
Document Type	Goods Receipt
Movement Type	101 (GR against PO)
PO Reference	4500000001
Material	MAT-001
Quantity Received	5,000 KG
Plant	PL01
Storage Location	SL01
Material Document	5000000001

Posting Date	27-Apr-2026
--------------	-------------

Automatic FI Posting: Dr. Raw Material Inventory (300000) INR 4,12,500 | Cr. GR/IR Clearing (691000) INR 4,12,500

4.6 Stage 6: Invoice Verification (MIRO)

The vendor provides an invoice for the goods they delivered. The finance team checks this invoice against the purchase order and goods receipt using MIRO, which is part of the Logistics Invoice Verification process. SAP then carries out a three-way match to ensure that the quantities and amounts on the purchase order, goods receipt, and invoice all agree with each other.

Field	Value
Transaction Code	MIRO
Document Type	Invoice Verification
Vendor Invoice Number	TSL-2026-0045
PO Reference	4500000001
Vendor	V-002 (Alloy Masters)
Field	Value
Material	MAT-001
Invoice Quantity	5,000 KG
Unit Price	INR 82.50
Net Invoice Amount	INR 4,12,500
GST (18%)	INR 74,250
Total Payable	INR 4,86,750
Invoice Date	27-Apr-2026
Due Date	12-Jun-2026 (Net 45 Days)

Automatic FI Postings: Dr. GR/IR Clearing (691000) INR 4,12,500 | Cr. Vendor Payable (200000) INR 4,12,500 Dr. Input GST Recoverable (600000) INR 74,250 | Cr. Vendor Payable (200000) INR 74,250

4.7 Stage 7: Vendor Payment (F-53)

The vendor is paid using transaction F-53 (Post Outgoing Payment) by the due date.

This action clears the vendor payable account and decreases the bank balance.

Field	Value
Transaction Code	F-53
Document Type	Payment
Vendor	V-002 (Alloy Masters)
Total Payment Amount	INR 4,86,750
Payment Method	Bank Transfer
Payment Date	12-Jun-2026
Invoice Reference	TSL-2026-0045
Bank Account Used	Company Bank - SBI

Automatic FI Posting: Dr. Vendor Payable (200000) INR 4,86,750 | Cr. Bank Account (100100) INR 4,86,750

5. Key Features & Controls in P2P

5.1 Three-Way Match Control – This is the most important control in the procurement to payment process. SAP automatically checks the Purchase Order, Goods Receipt, and Invoice. If all three match exactly, payment is automatically approved. However, if there is any difference, like a wrong quantity, price mismatch, or missing Goods Receipt, SAP stops the payment and notifies the Accounts Payable team.

5.2 Vendor Performance Tracking – SAP keeps track of how well vendors are performing by monitoring metrics like on-time delivery, quality of goods, accuracy of pricing, and accuracy of invoices.

This data is useful for choosing better vendors in the future and for negotiating better terms.

5.3 Real-Time Inventory Updates – Every time a Goods Receipt is made in MIGO, the inventory levels are updated instantly.

All departments across the company can see the current stock levels right away.

5.4 Automatic GL Posting – Each activity in the procurement to payment process, like Goods Receipt, Invoice Verification, and Payment, automatically creates financial entries in the General Ledger.

There's no need for manual accounting entries. This ensures that financial records are up to date in real time and reduces the risk of mistakes.

5.5 Exception Handling – SAP can be set up to highlight issues like receiving more goods than ordered, getting invoices for more than what was received, exceeding price variance limits, or getting late deliveries.

These exceptions trigger alerts so that the relevant teams can take action.

6. Tech Stack, Unique Points & Future Scope

Technology Stack

Component	Details
ERP System	SAP S/4HANA (Latest enterprise resource planning platform)
Module	SAP MM (Materials Management) with FI integration
Database	SAP HANA (In-memory, high-speed database)
Transactions Used	ME51N, ME41, ME47, ME21N, MIGO, MIRO, F-53
Country Config	India (with GST compliance)

Unique Points of This P2P Project

1. End-to-End Cycle with Screenshots — Covers all seven stages with detailed SAP transaction steps, master data configuration, real transaction screenshots, and the related accounting entries.

2. Three-Way Match Mechanism — Describes the important three-way match (Purchase Order, Goods Receipt, Invoice Verification) that stops overpayment, fraud, and duplicate invoices.

3. Automatic GL Integration — Demonstrates how every material management transaction automatically updates financials, offering real-time financial data without needing manual bookkeeping.

4. India-Specific GST Compliance — Explains how Indian GST rules are applied during invoice verification, including how Input GST is recovered and Output GST is calculated.

5. Complete Transaction Screenshots — Provides five real SAP transaction screens (ME51N, ME41, ME21N, MIGO, MIRO) with field-by-field instructions and navigation paths.

7. Future Improvements

#	Enhancement	Benefit
1	EDI Integration	Automatic PO transmission to vendors & invoice receipt
2	Vendor Portal	Vendors can track PO status, update delivery dates online
3	Smart Matching	AI-based exception detection for price/quantity variance
4	Procurement Analytics	Real-time dashboards for spend analysis, vendor performance
5	Contract Management	Rate contracts with automatic pricing updates in PO
6	Mobile Approval	Managers can approve requisitions & invoices via mobile app

8. Conclusion

The Procure-to-Pay (P2P) project shows a full, controlled way of purchasing in SAP MM that replaces manual spreadsheet-based buying. It follows a seven-step

process that ensures vendors compete fairly, pricing is clear, goods are properly checked upon arrival, and payments are managed carefully.

By using this P2P process, organizations get real-time updates on their buying activities, use the three-way match method to stop fraud, automatically update inventory and financial records, and cut down both the time and cost of procurement.

The project includes detailed SAP MM setup, step-by-step instructions with real SAP screenshots, accounting records, and control features — offering a full guide for any company wanting to digitalize and make their procurement process more efficient using SAP.
